## Brodie Neill Reverb chair, 2009

Designed in 2009, the Reverb chair is made of a wire frame network of mirror-polished steel rods. The chair was designed by London-based, Australian designer Brodie Neill for the Apartment Gallery and shown during the London Design Festival in 2009. As its name indicates, the inspiration for this expressive, mushroom-shaped chair with its distinctive conical geometry comes from the reverberation of sound, a combination of technology and craftsmanship that is evident throughout the chair. Neill also produced a solid version of this design using nickel-plated sheet aluminium.
